

# FALCON/ TERRITORY

WHITELINE are proud to offer a range of bushing solutions for the troublesome rear differentials of the Falcon BA-FG and Territory SX & SY models.

Extensive development and testing focusing on NVH (Noise Vibration Harshness) and ease of installation has lead WHITELINE to develop rear mounted differential bushings with design features 'outside the square' that deliver on performance, longevity, ride quality and installation.

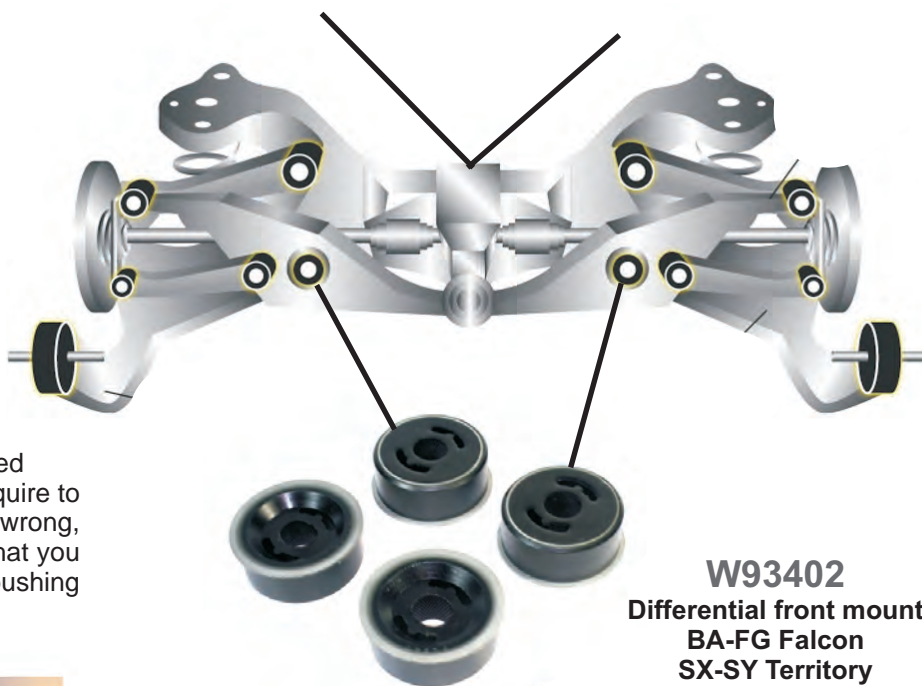

The front mounted bushings boast patented bushing designs, doing away with the traditional steel cased bushing with a dual durometer bushing that does not require the use of a press to install. Thats right install by hand with no compromise on bushing strength or performance!!!

**W93403**

BA-FG Falcon  
SX-SY Territory

### WHITELINE TECHNICAL TIP

It can be difficult to identify which rear mounted differential kit (W93403 or W93408) you require to do the job. You certainly don't want to get it wrong, so an easy way to accurately determine what you need is by the orientation of the factory bushing through bolt as per below.

Offset - W93403

On centre - W93408
